Reflection Control Panel

REFLECTION CONTROL PANEL

The Complete Acoustic Treatment Systems Reflection Control Panel is an acoustic treatment unit which optimises room reflections. It incorporates countersunk mounting points and is just 50 mm deep.

The CATS Reflection Control Panel is a complex engineered surface designed for wall mounting and which scatters room reflections for clearer, more enveloping audio at mid and high frequencies.

The Reflection Control Panel is a **3 mm rigid PVC** which has been injection moulded in CATS proprietary layout for maximum performance and ease of install with four countersunk mounting points.

The Reflection Control Panel has a total depth of just 50 mm making it one of the **shallowest reflection treatment solutions available**.

Dimensions Per Panel	300 x 300 x 50 mm (WHD)
Weight Per Panel	400g
Box Quantity	16x panels
Acoustic Data	Please see www.c-ats.co.uk/technical-information

Complete Acoustic Treatment System has been designed to specifically address the "Three Rs of Acoustics":

- Resonance
- Reverberation
- Reflection

Each component in the system is targeted at one of these three acoustical problems resulting in a comprehensive and repeatable solution that remains easy to install and integrate in to the room. All of this is achieved within a depth of just 50mm.
